Overview

This chapter provides an overview of the drivers for the MegaRAID controllers. It consists of the following sections:

• Section 1.1, “Driver Description”
• Section 1.2, “Driver Names”

1.1 Driver Description

You can install the MegaRAID controller in any IBM AT-compatible computer that has a PCI local bus. The controller can run under MS-DOS or any DOS-compatible operating system using the standard AT BIOS INT 13h hard disk drive interface.

To use the controller with other operating systems, you must install software drivers. LSI Logic provides software drivers for the following operating systems:

• MS-DOS version 6.xx or later
• Microsoft Windows NT V4.0, 2000, XP, and .NET
• Novell NetWare 5.1 and 6.0
• Red Hat Linux versions 7.3 and 8.0

Subsequent chapters in this manual provide detailed installation instructions for each operating system. Use the latest updates provided by the operating system manufacturer. Also, review the readme file that accompanies the driver for any updated information.

MegaRAID provides separate drivers for MegaRAID SCSI controllers and MegaRAID Serial ATA controllers. The MegaRAID Ultra320 SCSI driver supports 320 Mbyte/s data transfers using the Ultra320 SCSI
protocol. The MegaRAID Serial ATA driver supports 150 Mbyte/s data transfer using the Serial ATA protocol. Both drivers

- support the PCI 2.2 protocol
- support multiple RAID Storage Adapters (RSAs)
- provide the ability to see newly configured logical drivers in Disk Administrator without rebooting the system
- allow deletion of the last logical drive created using Power Console Plus (see the MegaRAID Configuration Software User’s Guide for more information)
- support use of the remaining array capacity by Power Console Plus

Because LSI Logic regularly updates device drivers, there might be a feature added to your driver that is not included in the most recent manual publication. If you have a question about a feature, consult the readme file that accompanied the driver, or contact your MegaRAID support representative.

### 1.2 Driver Names

Table 1.1 lists the device driver files for MegaRAID controllers. The driver files are available on the Driver and Documentation CD that accompanied your MegaRAID controller. LSI Logic updates the MegaRAID device drivers frequently. To ensure you have the current version of this driver, download the driver from the LSI Logic web site: [http://www.lsilogic.com](http://www.lsilogic.com). See the readme file that accompanies the driver for any updated information.

To make the driver diskette, copy the files from the Driver and Documentation CD to an empty floppy diskette, or download the driver files from the LSI Logic webpage and copy them to an empty floppy diskette. Label the diskette as the MegaRAID driver diskette for the given operating system.
